

World Water Quality Alliance (2021)

2016

2016

Towards a Worldwide Assessment of Freshwater Quality

A UN-Water Analytical Brief

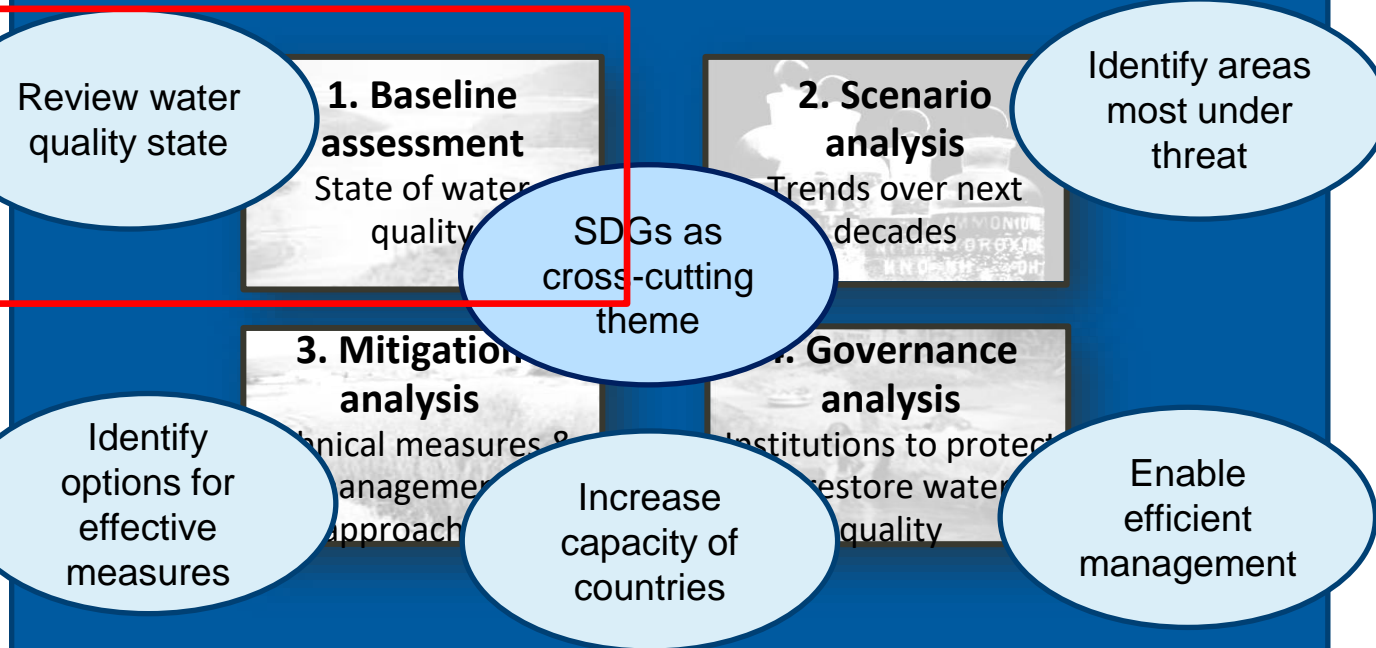

The World Water Quality Assessment Workstream 'Baseline Assessment': Focus, Status and Agenda

Dietrich Borchardt, Ilona Bärlund, Christian Schmidt and the Assessment team

Towards a full World Water Quality Assessment

- Approach: DPSIR, pre-study, WWQA triangle
- Trademarks of success (legitimacy, credibility) & Trade-offs

- Interfaces with operational services and policy advice

UN-Water Analytical Brief (2016)

Towards a full World Water Quality Assessment

Inf Doc Annex for "UNEA-5a" Dec 2020

2nd Annual Global Meeting (virtual) Jan 2021

Baseline Assessment Working group meetings:

Modelling (Delft) Jan 2020

Remote Sensing (Leipzig) Jan 2020

In-Situ Data (virtual Leipzig) Apr 2020

Joint (virtual Bochum) Sept 2020

Start GlobeWQ project 2019-2022

Start African Use Cases (Volta, Victoria, Cape Town) 2019-2020

1st Annual Global Meeting (Ispra) Sept 2019

WWQA WGs incl. Baseline Assessment

UNEP/EA.3/Res.10 Mandate World Water Quality Assessment Dec 2017

Inception Meeting (Geneva) World Water Quality Alliance Nov 2018

2016 Towards a Worldwide Assessment of Freshwater Quality A UN Water Perspective

Snapshot Report & Analytical Brief UNEP/UN Water 2016

First Global Display of a Water Quality Baseline

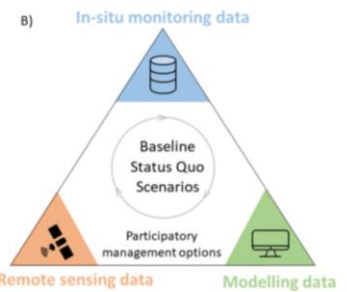

Methods

Tools

Models	Simulated water quality parameters	Water body type ¹	Spatial aggregation of model outputs	Temporal aggregation of model outputs	Key references			
Parameter group	Parameters ²		Resolution ³	Baseline year				
DRASTIC	Nutrients	NO _x	a	15 km	Africa	10-year	1990-2010	Ouedraogo et al. (2016)
GlobalAQUW	Geogenic contaminants	Arsenic	a	30 arcseconds	Global	NA (static) ⁴	Pre-2019	Podgorski and Berg (2020)
GlobalPa	Microorganisms	Cryptosporidium	b	0.5 degree	Global	Monthly	Around 2010	Vermeulen et al. (2019)
GREMIS	Others	Microplastics	b, d	Basin	Global	Annual	2000	van Wijnen et al. (2019)
IMAGE-GNM	Nutrients	TN, TP, Si	a, b, c	0.5 degree	Global and (sub-basins) ⁴	Annual	1970-2015	Beusen et al. (2015), van Ruijvenbroek et al. (2019)
Insecticide model	Pesticides	Insecticides ⁵	b	5 degree	Global	Static ⁴	2000-2010	Ippolito et al. (2015)
MARINA-Global (multi-pollutant)	Nutrients	DIN, DON, DIP, DOP	b, d	Sub-basin	Global	Annual	2010	Strokal et al. (n.d., 2016, 2019), van Wijnen et al. (2017)
MARINA (version 2.0)	Nutrients	DIN, DON, DIP, DOP	b, d	Sub-basin	China	Annual	2012	Wang et al. (2020a)
QUAL	Physical	Water temperature	b, c	0.5 degree	Global	Monthly	1980-2010	van Vliet et al. (2020)
	Organics	BOD						
	Salinity	TDS						
WaterGAP-WorldQual	Physical	Water temperature			Global		1971-2010	Punzet et al. (2012)
	Nutrients	TP						
	Organics	BOD	b, c	5 arcminutes	Africa, Asia, Europe and Latin America	Monthly	1990-2010	Viel et al. (2013), Bader et al. (2015), Fink et al. (2018)
WFLOW-DWAQ	Microorganisms	Faecal Coliform	b, c	1 km	Europe	Annual	2017-2018	van Gils et al. (2020)
	Others	Contaminants ⁶						

11 models

Remote sensing products/datasets	Water quality parameters ¹	Spatial resolution ² & coverage	Temporal resolution & coverage	Key Documentation
Diversity II	TSS, turbidity, cDOM, T _{oc2} , chl-a, cyanobacteria and floating vegetation	300 m 350 lakes worldwide	monthly 04/2002-03/2012	Odermatt et al. (2018) http://www.diversity2.info/products/documenty/
GLS (Copernicus Global Land Service)	Thermal	300 m 10-6m 1000 lakes worldwide	10-6m 04/2002-03/2012 and 2016- present	https://land.copernicus.eu/global/products/ltw/
UNESCO-IHP IWQ World Water Quality Portal and ESA Hydrology-TIP SDG Reporting Portal	Turbidity, SOD, T _{oc2} , TSS, chl-a, trophic state index, harmful algal bloom (HAB) indicator	90 m for global inland and coastal waters 10-500 m (mostly 30 m) for use cases	Single snapshot between 2013-2017 for global inland and coastal waters Daily to seasonal for 2010 onwards for use cases	http://ddp.hydrology-tpg.eu/ www.worldwaterquality.org

4 remote sensing products

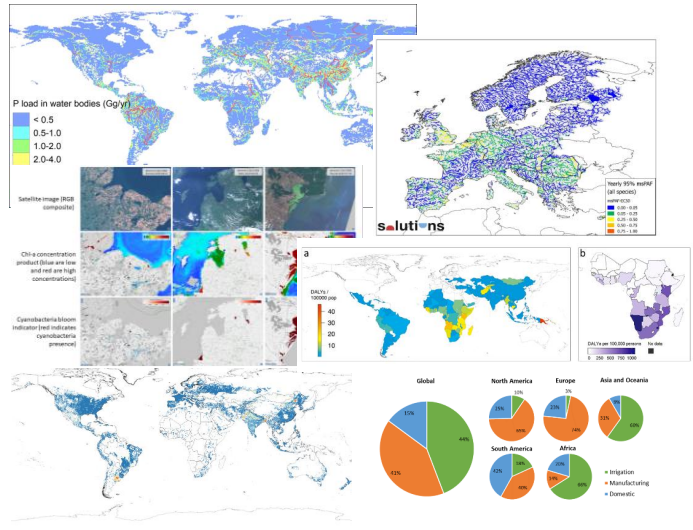

1 in-situ WQ database
(used for model validation and testing)

Outcome

Water quality impacts on ecosystem health, human health and food security + Introducing Use Cases and Digital Platforms

Engine: Writing Task Force and 37 co-authors

First Global Display of a Water Quality Baseline

Key findings

- Results can be used to identify water quality hotspots and help to identify some of the key drivers
- Provide context in support of the evaluation of reaching the SDG 6 target 6.3
- Specific findings for water quality impacts on ecosystem health, human health and food security
- Water quality hotspots frequently overlap for many of the pollutants under consideration and are located in densely populated areas

This Assessment is still at a preliminary stage, many major challenges identified ...

World Water Quality Assessment – Workstream Baseline Assessment

Planned next steps in 2021

1. Collect feedback on the First Global Display of a Water Quality Baseline from
a) the author team, b) the participants of virtual Bochum not contributing to the Annex and c) WWQA at large
2. Collect possible feedback from “UNEA-5a”
3. Strengthening links (e.g. groundwater) and possible extension of the network (e.g. in-situ data holders beyond GEMS)
4. Improvement of the triangulation approach (together with proposed workstreams on GlobeWQ and Use Cases) and exchange with the scenario process (together with the proposed new workstream on scenario assessment)
5. Update of the Baseline Assessment (in-situ meeting planned for Sept 2021)
6. Submission of the updated Baseline Assessment for UNEA-5b
