

Interactive Story Maps on SDG Indicator 6.3.2

- Created by [Anham Salyani](#) on Oct 04, 2021, last modified by [Anham Salyani](#) on Oct 04, 2021

Accompanying the release of the new [SDG 6.3.2 Status Report on Global Water Quality](#), GEMS/Water has published two interactive Story Maps with background information, videos, charts and maps.

The first Story Map "[Global updates and acceleration needs](#)" showcases the findings and key insights from the 2020 data drive, and how this information can support action designed to improve and protect water quality. Using real-world examples, these actions are described through the five accelerators of the *SDG 6 Global Acceleration Framework*, and that transformative change can be achieved within the lifetime of the 2030 Agenda for Sustainable Development.

The second Story Map "[Methodology and implementation examples](#)" provides background information on the indicator methodology and its constituent parts. To demonstrate how the indicator has been implemented in different world regions, six case studies are presented that reflect differing national situations. These case studies demonstrate that regardless of a country's capacity to monitor and assess water quality, the indicator can provide vital information for the management of water resources, whilst simultaneously providing insight into national capacity gaps and that can be used to guide future development and support.

To learn more about SDG indicator 6.3.2 visit the [SDG 632 Webpage](#) or [Support Platform](#) and contact us at SDG632@un.org
